# Problem Background

## Problem

Transportation is one of the problems many Filipinos face day to day.

## Problem

One problem is that the large amount of private cars on the road can cause congestion.

## Problem

A way to mitigate this problem is  
to encourage people to  
commute.

## Problem

Commuting, though, is a very complicated process, which can intimidate those new to it. Safety is also another concern for commuters

# Idea Concept

## Idea

Create a navigational algorithm for commuters that implements a user-based rating system.

# Approaches on Algorithmic Solution

# Inputs and Data

# Benefits and Social Impact

# Code Demonstration
